## 4.4 Analysis of Competitive Landscape

### 4.4.1 Manufacturers Market Concentration Ratio (CR5 and HHI)

The standard tools of competition economists and competition authorities to measure market concentration are the Herfindahl-Hirschman Index (HHI) and the concentration ratios (CR(n)).

The Herfindahl-Hirschman Index (HHI) is a common measure of market concentration that is used to determine market competitiveness. The Herfindahl-Hirschman Index (HHI) is a commonly accepted measure of market concentration. It is calculated by squaring the market share of each firm competing in a market and then summing the resulting numbers. It can range from close to zero to 10,000.

The concentration ratio is the percentage of market share owned by the largest n firms in an industry, where n is a specified number of firms. In this report, we present the CR5, means the market share of the five largest firms.

Below table details the market concentration ratio in the past three years. The top five manufacturers held xx% of the market, in terms of Lithium-ion Battery Filling Machine revenue in 2023.
